

# SAFE - T - STIK

## SAFEHANDS TOOLS

### 1 OVERVIEW

Keep your employees clear of dangerous situations with a "hands off" approach. Safe-T-Stik allows workers to keep a safe distance away from heavy, unwieldy, unforgiving large steel objects. No more using hands, feet, shovels or 2x4s. With Safe-T-Stik, there's no more risking worker safety when moving steel road plate or trench plate.

Safe-T-Stik uses a "Super Magnet" to attach itself to steel with more than 400 pounds of attraction force. A worker can comfortably and authoritatively control and guide road plate or trench plate into and out of position with greater safety and reduce the risk of damaging equipment or property.

### 2 FEATURES

- Easy to use, light weight and highly visible.
- Designed and built to handle tough work environments.
- Super strong magnet system
- Robust UV and corrosion resistant materials
- FRP tube, fiberglass and rubber hand grips
- 400 LBS of pull force

### 3 PRODUCT SPECIFICATIONS
